Online Entries Will Be Accepted Starting July 1, 2017

There are approximately 180,000 boys and girls actively engaged in club work in Tennessee, with about 65,000 of them in the eastern portion of the state. The work is conducted by Extension Agents and is under the supervision of the University of Tennessee Extension, Dr. Tim Cross, Director.

An important task for every 4-H member is to select standard products to be exhibited at the Fair. Not only are standard products to be exhibited, but the methods and procedures by which the standard products are produced to the end. For the encouragement of the club work in general and for the improvement in the quality of products to be exhibited, the Tennessee Valley Fair has established this department and is offering liberal prizes exclusively to club members who are working under supervision of Extension Agents in East Tennessee.

All 4-H members in the Eastern Region are eligible to compete for prizes.

Important Notice

The Fair will open to the public at 3:00 p.m., Friday, September 8th, and close at midnight, Sunday, September 17th. In order to open at 3:00 p.m. on Friday, we must have as many exhibits as possible in place by this time.

Score card

Yield per Acre _____ 90 points
 Soundness of Grain _____ 10 points

1. **Corn must be a dent hybrid or open-pollinated variety and grown during the current season by the exhibitor.**
2. Entries in this class will be judged on yield per acre and on an exhibit consisting of ten (10) ears of corn selected from the plot used in getting a sample. This plot is charted below.
3. Corn to be harvested consists of three (3) rows each 15 feet long and five rows apart. The dimensions of the rectangular plot will be 15 feet in length of row, and eleven (11) rows in width. A total of 45 feet of row will be harvested.

4. The corn sample should be shucked and must be selected in accordance with the chart above. **Count the total number of plants harvested and record this number. Weigh the sample and record the weight.** Spring, digital, and platform scales are all acceptable devices for determining the sample weight. From this sample, **collect two (2) ten-ear sub-samples.**
5. Bring these two 10-ear sub-samples to the Jacob Building. **Do not bring the entire harvested sample.**
6. One 10-ear sub-sample will be used by the Fair to determine the moisture content of the grain at harvest and will then be removed from the building by the exhibitor..
7. The other 10 ears will be the exhibit to be displayed with the yield results. **Exhibit must include the recorded sample weight, harvested plant count, row width, and brand/hybrid or variety name.**
8. Uniform samples with a minimum of insect damage and rots are desired. Ears should be intact including unfilled tips. (These 10 ears may also be entered in Class 2, Lot 1)

No. of Plants per Acre*	Weight of Sample	

* Plants per acre = (11616/row width in inches) x Number of plants harvested from 45' of row.

Class 3—Irish Potato Production Exhibit

Scoring

Entries in this class will be judged on yield per acre and on an exhibit consisting of sixteen (16) selected potatoes.

Yield Verification

Yields to be verified before or after harvest by authorized agent of the Fair Association, designated in cooperation with the UT Extension and Department of Vocational Agricultural. Yield scores will be provided to Department Superintendent at time of entry.

Potato Yield Determination Before Harvest

All row-crop yields can be directly determined without computation by weighing the yield from a specified row length and moving decimal point left or right. In the case of potatoes in 3ft rows, the pounds produced on 24 ft. of row give acre yield in 60 pound bushels by moving the decimal point one space to the right.

Example: 26.5 pounds equals 265 bushels per acre.

Yield checking should be done after vines have died and before crabgrass takes over. Three to five samplings should be taken per acre, averaged together. Samplings should properly represent field variability. The less variable the vine growth, the fewer the yield samplings needed. Indicate weight of each sample.

Row length harvested is related to row spacing as follows:

32"=27'6", 36"=24'0", 38"=22'8", 42"=20'7"

Most useful equipment for field checking is a long-handled, six-tine fork, a basket, and a spring scale.

Each 4-H group is eligible to decorate one (1) round bale per county. Counties may enter more than 1 if space allows. The bale should be decorated using the participants' imagination and creativity. All themes must be tasteful and not offensive. The Tennessee Valley Fair will supply one (1) round bale per group. Participating groups are responsible for decorating supplies and can use up to eight (8) smaller square bales, supplied by the participant. All decorations must be **weather durable** for at least 10 days and must be secured to the hay bale. Each entry **Must Be Pre-Entered** so that the Tennessee Valley Fair can obtain the correct number of bales. The first 10 entries will be accepted. **Each 4-H group is responsible for providing a sign to mount on the hay bale for county identification.** Please specify whether the round bale is to be placed on the side or stood on end. The county agent will be notified as to the location of the assigned bale prior to September 10th.
